

Brian Kominick

610-406-7384 | brian.kominick@tutanota.com

Software engineer with 5+ years of experience in backend development and QA automation. Currently pursuing a thesis-driven M.S. in computer science, with research at the intersection of compilers and computer architecture. Especially interested in low-level performance engineering and toolchain development.

Experience

FreedomPay

- Quality Web Engineer

January 2023 – July 2025

- Established CI/CD pipelines on ADO to automate build and test workflows.
- Built a reporting feature to collect and publish build/run metadata, improving visibility into test results and system performance across the web department.
- Led evaluation of a third-party customer-facing web application, assessing quality, performance, and integration viability. Delivered technical feedback to stakeholders on readiness for production deployment and advised on the decision of whether to adopt.
- Created reusable Java automation framework for multiple applications, including a service to facilitate onboarding 40,000+ client locations, ensuring performance at scale.

PNC

- Automation Engineer

April 2022 – December 2022

- Increased team velocity by roughly 20% by formalizing communication, standardizing meetings, and increasing participation in scrum ceremonies.
- Doubled test coverage by adding Java automation infrastructure to support database and Kafka services.
- Updated automation frameworks across multiple teams and helped introduce quality control through pull requests and code reviews.

Corista

- QA Engineer

November 2021 – March 2022

- Created pytest infrastructure for backend services in dev and prod environments.
- Offloaded performance testing from local machines onto remote environments with Docker and Kubernetes, increasing performance and visibility.

Insulet

- Automation Engineer

June 2020 – November 2021

- Automated test run validation and recording workflow for team of 15 developers.
- Executed validation and accompanying documentation of automation framework for each release to be submitted to FDA.
- Designed and implemented new iterations of automation framework and test suites.

Education

Computer Science M.S.

2024 – Present

West Chester University – West Chester, Pennsylvania

– Thesis: Optimizing RISC-V backend code generation

Computer Science B.A.

2020

Boston College – Chestnut Hill, Massachusetts

Skills: Java, Python, SQL, Bash, Javascript, C, C++, Azure DevOps, Dynatrace
