SUMMARY

Software engineer with 5+ years of experience in development and QA automation. Currently pursuing a thesis-driven M.S. in computer science, with research spanning from applied usage of generative AI to the enhancement of sustainability in computing through compiler-level infrastructure.

WORK EXPERIENCE

FreedomPay: QA Engineer

Jan 2023 - July 2025

- Created reusable Java automation framework, integrated with CI pipelines, for multiple applications, including a service to facilitate onboarding 40,000+ client locations, ensuring performance at scale.
- Built a reporting feature to collect and publish build/run metadata, improving visibility into test results and system performance across the web department.
- Led evaluation of a third-party customer-facing web application, assessing quality, performance, and integration viability. Delivered technical feedback to stakeholders on readiness for production deployment and advised on the decision of whether to adopt.

PNC: Automation Engineer

April 2022 - December 2022

- Increased team velocity by roughly 20% by formalizing communication, standardizing meetings, and increasing participation in scrum ceremonies.
- Updated automation frameworks across multiple teams, adding database and Kafka connections in addition to user-focused tests, and helped introduce quality control through pull requests and code reviews.

Corista: QA Engineer

Nov 2021 - March 2022

- Offloaded performance testing from local machines onto remote environments with Docker and Kubernetes, increasing performance and visibility.
- Created pytest infrastructure for backend services in dev and prod environments.

Insulet: Test Automation Engineer

June 2020 - Nov 2021

- Significantly increased throughput and standardization by automating manual workflows for team of 15 developers.
- Executed validation and accompanying documentation of automation framework for each release to be submitted to FDA.
- Designed and implemented new features of python framework to automate environment with various hardware, peripherals, mobile devices, and GUI applications.

PROJECTS

Canine Performance Tracking Mobile App - *In Progress*

Developing domain-driven, cross-platform mobile app with React Native and Typescript to enable competition result logging and provide data-driven insights into performance and progression toward goals.

Plant Data Monitoring Tools

Designed and implemented end-to-end IoT data pipeline using ESP32 (ESP-IDF, FreeRTOS) to collect sensor telemetry, publish secure MQTT messages, ingest data on a server, persist to a database, and visualize metrics on Grafana dashboards.

Desktop Ecommerce Platform

Built a GUI-based e-commerce platform using Java, SQL, and Docker, enabling customers to browse and place orders while providing admin-level inventory management.

EDUCATION

Computer Science M.S. - West Chester University	2024 - present
– <i>1st Place, Graduate Poster & Presentation - Student Research Day</i>	
Computer Science B.A. - Boston College	2016 - 2020

SKILLS

Languages: Java, Python, C, C++, JavaScript, TypeScript, Rust, SQL, Bash
Frameworks: React, React Native, Next.js, Cypress, Cucumber, Katalon, Selenium
Tools: Azure DevOps, Git, Docker, Kubernetes, Dynatrace, Grafana
